Lab Tour: Capture and Modeling of 3D Humans in 3D Scenes

For the Karunratanakul

PhD student

Computer Vision and Learning Group (VLG)

ETH Zurich, Switzerland

An overview of our group (and our fields)

From my understanding ...

Without verifying with my advisor first ...

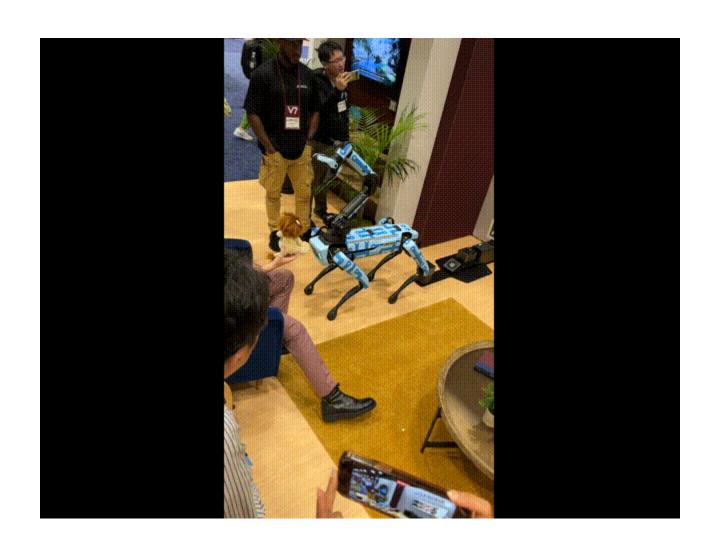

A Digital Replica of the World

Embodied Agent in the Digital World

Embodied Agent in the Digital World

Generating Realistic Human Behaviors is Hard

Generating Realistic Human Behaviors is Hard

Hassan et al., Resolving 3D Human Pose Ambiguities with 3D Scene Constraints, ICCV 2019

Generating Realistic Human Behaviors is Hard

- Body Shapes
- Articulation
- 3D scenes and objects
- Physical plausibility
- Semantics

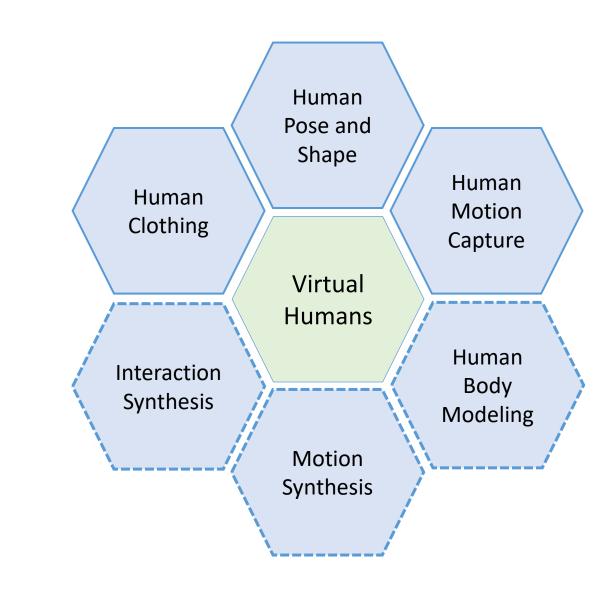

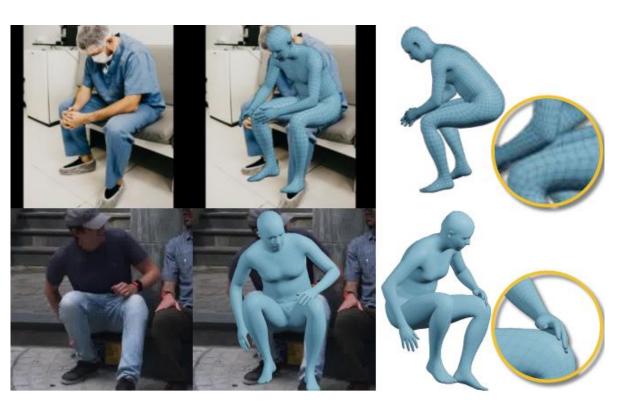

Our Research: Capture and model 3D humans in 3D scenes

"Our goal is to build virtual humans that look, move, and behave like real ones"

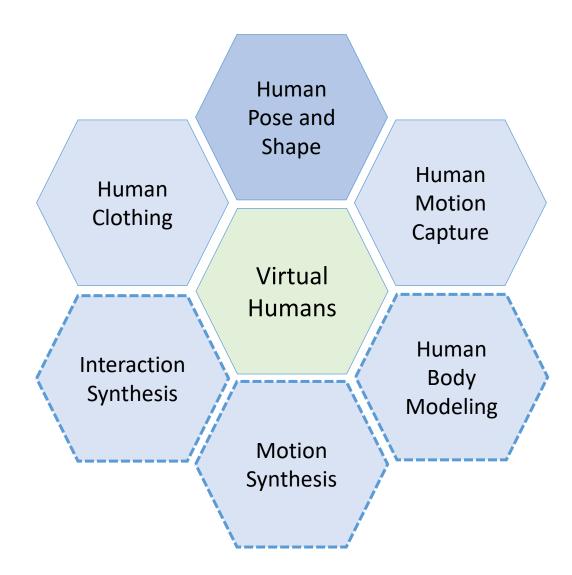

— Siyu Tang, from some talk.

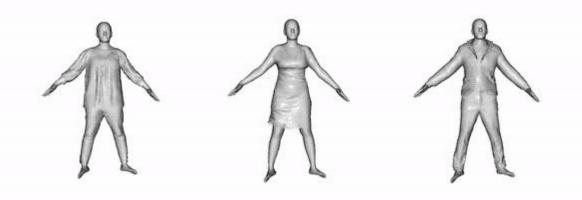

[1] PTF, CVPR 2021[2] TUCH, CVPR 2021

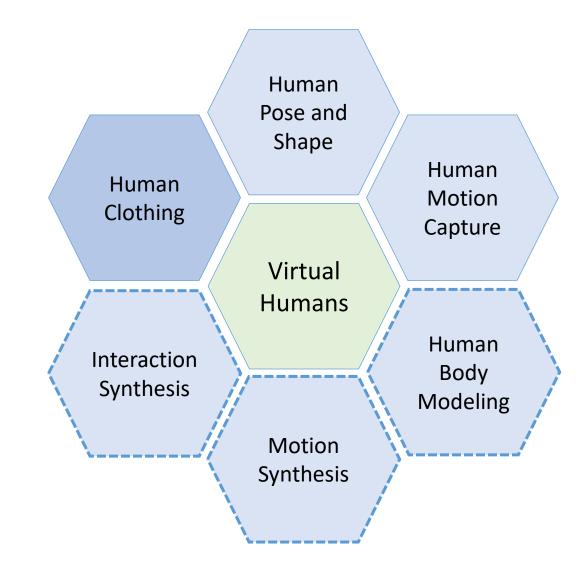

pose-depedent shapes: single model, multi-outfit

Question?

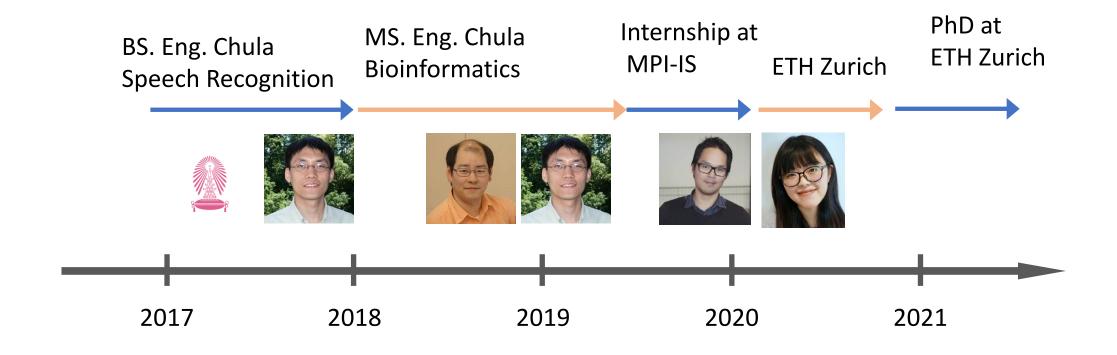

Non-technical Q&A

How Did I End Up Here?

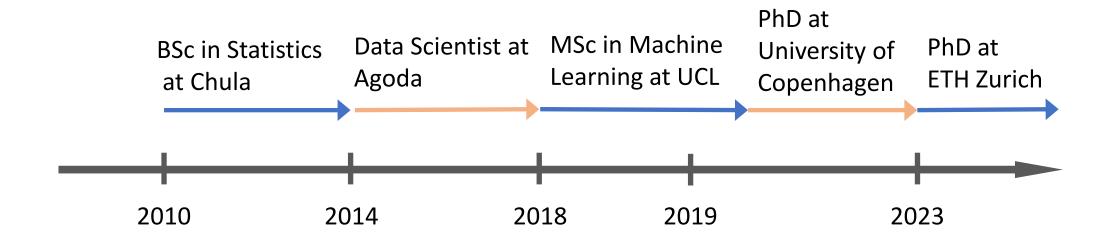

Why this lab? I don't know...

Computer Vision

How Did I End Up Here?

Day-to-day Life

- Your PhD life is 80% depends on your advisor
- Everything is good as long as your work is done
- More supervision in 1st-2nd year (weekly 1-1 meeting)

For me:

- Flexible working hours (meaning: 12pm until sleep)
- Mostly remote
- Biking, gym, cooking

Struggles

- Language
- Loneliness?
- Depression
- Work-life balance
- Handling deadlines
- Handling paper rejections

The first paper is usually the hardest one. It will get better from there

Research Culture

Differences and suggestions

- Own your project project
- Take initiative. Find a way out
- Find someone to discuss ideas with

Soft Skills

Differences and suggestions

- Know how to ask others for help
 - But no one is responsible for your life!
- Making connections
 - Emailing people, GitHub, attending conferences
- Presentation skill
 - PhDs are usually the least busy person in the food chain so respect other's time
 - Understand your audience
- Time management
- Know when to take a break

Applying for Positions (including internship)

You either have

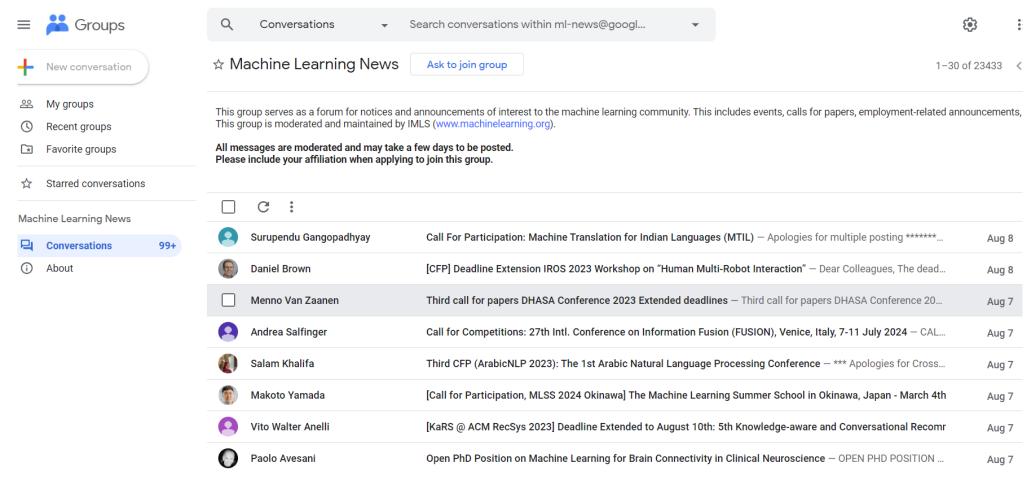

- Paper(s)
- Or connections and someone credible who can recommend you

Then apply and email them

The applying process differs from place to place. (so there is no standard process)

Keep an eye on: https://groups.google.com/g/ml-news

Applying for Positions (including internship)

Keep an eye on: https://groups.google.com/g/ml-news

Applying for ETH

- Master's degree
 - 2 years
 - Strongest University in Continental Europe (we don't care about islands here) (by some ranking)
 - Essentially free
 - Cost of living around 1500 CHF (\$1700 / 60k THB) per month

PhD

- Strong labs in ML (Robotics, Computer Vision, theory, etc.)
- Comfortable life (in term of money)
- Very few mandatory course works
- To apply: Contact advisors first

Applying for ETH

• ETH Al Center

Max Planck ETH Center for Learning Systems

• Zurich Graduate School in Mathematics
